A soil test is the best way to check the growing potential of your garden. You can buy the most attractive plants in the greenhouse or order the best seeds, but they won’t produce the best results if the soil lacks the proper nutrition or the proper qualities the soil should have.

The “routine” Garden and Landscape test will take the guess work out of your garden’s growing potential. It will guide you in deciding which nutrients are lacking and sometimes, more importantly, which you have too much of. Over-fertilizing is a common gardening problem. It is not only expensive, but it may harm your garden’s production and our environment.
Date: _______________ Number of samples ____________

CLIENT TYPE (Check one)

Sample ID(s) ____________________________________ __Homeowner          __Operator

Full Name: ____________________________________________ __Golf Course          __Nursery/Garden

Business: ____________________________________________ __Lawn Care Co.      __Dealer/Distributor

Mailing Address: ______________________________________ __Consultant          __Landscape Co.

____________________________________________________________________________________

__Government/School __ Extension Agent

City     State     Zip Code

Phone #: ________________________________

E-mail Address ________________________________

Where did you hear about us? __________

By accepting service or goods, I agree to submit payment in full to Colorado State University upon receipt of invoice or University Billing Statement. Late Payment charges of 1.5% per month and other penalties may be assessed for late payment.

The following information will help us give you a better written explanation of the laboratory results. If submitting soil samples from different use areas (e.g. lawn, vegetable garden, flower bed), use a separate form for each area.

PLEASE CHECK ALL THAT APPLY (See page 3 for sampling instructions)

1. The soil sample is from:
   __Lawn    __Vegetable Garden   __Flower bed    __Container plantings     __Golf Course
   __Greenhouse   __Reclamation Site   __Other

2. What is currently growing on the site? For how long? _______ yrs
   __Vegetables   __Flowers     __Turfgrass   __Trees     __Other

3. What do you plan to grow at the site?
   __Vegetables     __Flowers   __Turfgrass   __Trees     __Other

   If you are growing turf: Is this a new site to be ___seeded or ___sodded? What grass species/variety will you use? ____________________________________________________________________________

   Is it an existing lawn? _________ If so, how old is the lawn? _________ What type of grass? ______________

4. Will this site be irrigated/watered? __Yes    __No
   If yes, which method? ___Sprinkler  ___Flood   ___Drip  Other (please specify) ____________________________________________________________________

   How often do you irrigate/water? ___Daily   ___Once per week  ___Twice per week
   __Other

   How much water do you add with each irrigation? __________________________________________________________________________

5. If possible, list the types of previous crops or plants that grew on this site: __________________________________________________________________

6. What fertilizers or amendments (e.g. compost, manure) have you added to the soil, how much did you apply, and how long ago did you apply it?
   ______________________________________________________________________________________________________________________________________
7. Please list specific fertilizers or amendments that you plan to add to the soil
_______________________________________________________________________________________________
_______________________________________________________________________________________________

8. Is there a specific problem with this site?  ___No   ___Yes
If yes, please describe the problem, what caused the problem, and why you think it was the cause.
_______________________________________________________________________________________________
_______________________________________________________________________________________________

9. If you wish to have a fertilizer recommendation based on organic fertilizers, please answer the following questions.

What is the type of material that will be used for organic fertilizer? _______________________________________

Do you know the nutrient levels in the organic fertilizer?  ___No   ___Yes
If yes, please supply the following information:  % nitrogen _____  % phosphorus_____  % potassium _____
          pH_____   Salts (mmhos/cm) _________

10. In what units do you want to receive our fertilizer recommendation?
    ___Lbs per Acre     ___Lbs per 1000 sq.ft.    ___ Lbs per 100 sq.ft.  ___Kg per Hectare

MINIMUM CHARGE $15.00

NOTE: A 25% discount coupon for rerun analyses will be included with your test results.
For special issues and problems, a soil specialist is available for an individual phone or email consultation (approx. 1 hr) at the cost of $50.00.

Soil, Water & Plant Testing Lab, Campus Delivery 1120 Room A-320 NESB, Fort Collins CO 80523-1120
Revised 7/26/21
**SUGGESTED INSTRUCTIONS FOR SUBMITTING SOIL SAMPLES**

*Taking a good soil sample is vital to obtaining useful laboratory results.*

Please use the following steps to submit soil samples:

1. A soil sample may be taken at any time of the year, although spring and fall are usually the most convenient times. Avoid soil sampling within 30 days of an application of nitrogen fertilizer, compost or manure.

2. A soil sample should represent a uniform area consisting of land that is similar in slope, drainage, texture, or other characteristics that make the soil the same. Submit a separate sample for each area that receives different fertilizer, amendments and/or soil management treatments. For example, garden areas are managed differently from lawns, so the garden should be sampled separately from the lawn. Different garden beds, or different yard areas, that receive differing amounts of fertilizers, soil amendments or irrigation should also be sampled separately.

3. Use a clean, rust-free trowel, spade, soil tube or soil auger to collect your soil sample. Each sample should be a composite of 5 to 15 samples (depending on the size of the area) collected randomly throughout the chosen area. Collect these samples to a depth of 6 inches, and combine them in a clean plastic container. Try to dig straight down, rather than at an angle, so that equal amounts of soil are collected at each depth increment. Try to collect about the same amount of soil from each sampling area.

4. Mix the samples together thoroughly, removing plant debris and breaking up clods. Remove about 2 cups of soil and, if possible, air-dry it by spreading it out on paper towels. *(Do not oven-dry soil samples.)* We will accept moist samples if air drying isn’t possible.

5. Place the soil sample into the CSU soil container (preferred), or a zipper-seal plastic bag. Seal the container and label the sample with name, address and location of the sample (for example “Vegetable Garden”, “Lawn1”, “Lawn2”, etc.). Please do not place form inside container with soil sample, but don’t forget to include the form in the package.

6. If multiple samples are being submitted for analysis, including a map of your sampling procedure would be helpful in interpreting the laboratory analyses.

7. Complete the soil sample information form as completely as possible and include it with the soil sample(s). Use a separate form for samples coming from different types of areas (e.g. lawn, vegetable garden, flower bed, etc.)

8. **Mail sample(s) to the lab using the following address:** Soil, Water & Plant Testing Lab, 200 West Lake St., 1120 Campus Delivery Fort Collins, CO 80523-1120 *(to deliver, physical address 1231 Libbie Coy Way)*

9. Please keep samples cool before mailing. If samples heat up, the nitrogen readings can change dramatically. Keeping samples in the shade will help prevent excess heating.

10. An invoice is required; you will need to provide all the information requested on the front side of the form. If you would like to pay by credit card we accept MasterCard, Visa and Discover.

11. The lab **DOES NOT** test for herbicides or pesticides. Please call Greg Dooley (CSU Analytical Toxicology Lab) at 970-491-5128 or email gregory.dooley@colostate.edu.

12. If you have additional questions, please contact the lab at: *(970) 491-5061, or your local county Cooperative Extension Agent ([www.ext.colostate.edu](http://www.ext.colostate.edu), click on “County Offices”).

**COMMENTS:**

1. The objective of the CSU soil testing lab is to provide you with suggestions that improve soil health while producing healthy garden and landscape plants.

2. Different laboratories do not always use the same soil test procedures, so the numbers from different labs will not necessarily match, nor will a numerical value obtained from one lab necessarily have the same interpretation as that same number from another lab. However, recommendations from different labs for a given soil sample will be essentially the same.

3. Your soil test results may indicate that the soil properties analyzed are normal and not a cause for problems you may have observed in your garden or landscape. Other causes for observed problems may be soil compaction, over- or under-watering, poor soil drainage, diseases, insects, weed competition, too much shade, poor plant varieties, or basic neglect.
